

Release Summary

Product Name: About My Professor

Team: Bhagavan, Edwin, Ivan, Lakshana

Date: 12/02/25

Key user stories:

- As a student I want an application that is easy to open, close, or move so that the search page doesn't become too dense
- As a student I want to know the full name of a professor so that I can recognize professors that are mainly known by their first names.
- As a student I want to know the email/phone number of a professor so that I can have a way to contact them regarding information about the class.
- As a student I want to see a picture of the professor so I can recognize them in person.
- As a student I want to know the OH of a professor so I can figure out my entire schedule.
- As a student I want to know what department a professor is in so that I know their specialty.
- As a new student I want to know the division/other classes taught by a professor so that I can recognize the division name when people talk about it.
- As a student interested in research I want to see if a professor has research interests so that I can connect with them.
- As a student I want easy access to the Rate My Professor rating of the professor so I know if other students generally enjoyed their class.
- As a student I want to have this information also available in the shopping cart page so that I can better plan my quarter.
- As a student I want a link to the professors website so that I can learn more about them
- As a student I want to know what other classes a professor has taught or will teach so that I can explore them if I am interested in the class or like their teaching style
- As an extension user I want the information I see to be clearly structured and the information displayed dynamically but consistently so that I can easily find/see the information I want
- As a student, I want to be able to easily access the extension as well as future updates
- As a browser I want websites and extensions I use to load quickly so I don't have to wait for information especially if I just visited the page

Acceptance Criteria:

- Key User Stories from the MVP have been addressed
- Other Key User Stories that have been implemented enhance the user experience
- All Key User Story implementations do not leave major pain points for users

Known Problems: List the major bugs (you can reference your Test Report), omissions missing functionality, edge cases that are not handled), design shortcuts (e.g. hard coded data), etc.- add what we tried doing

- Can't get all uIDs and can't always match names in the search page or shopping cart to the names associated with the uID (if we don't have a uID we don't display anything for them) - we scraped for uIDs multiple times and tried to do partial name matching (like if middle name is missing)
- When multiple prof info popups are open, a click to an specific info button for a prof (whose modal is already on the screen) doesn't bring up the modal to the top of the screen - ran out of time to fix this
- Need to merge scraped data of classes taught with data from api (right now just display scraped data b/c api data is not uniform) -ran out of time to fix and test this
- when scraping for classes taught, hard coded websites to scrape from course catalog instead of all - b/c seemed faster/easier and was running out of time
- the info button in the shopping cart is not in an ideal position - tried fixing using css but decided to move on to other important tasks
- don't have office hours info for all professors (not posted in the staff directory api) - didn't find other places where OH were posted for all staff
- Modal opens partially cut off and doesn't display the close button - ran out of time to fix
- Only shows professor info for one professor when there are more than one - discovered when we were out of time to fix
- In [content.js](#) getProfNameInSearch function has redundant code in it - ran out of time to clean up and re-test
- Code has extraneous comments from testing and header comments are not uniform in structure b/c didn't have strict style guide
- could have modularized more things in render into functions in content.js - ran out of time to fix and test this
- Lock symbol on the pop-up looks like a person and could be confusing - ran out of time to change this

Product Backlog: Provide a list the high priority user stories and bug fixes that can serve as a guide for a follow-on project.

- add extension functionality to the Class Schedule page
- figure out how to move the info button in the shopping cart to a better spot using css
- fix the problems with not being able to match all names to uIDs & get all missing uIDs
- add an AI chat bot that can find teachers that meet specified criteria in a search page and give specified comparisons or other specified info
- scrape info from professors personal websites if not on the staff directory api
- Update Chrome Store Release Version
- change icon of lock-unlock button on pop-up to be more clear when locked

Note: There will be no penalty for system failures during the project review that are due to known problems.
