

Def Of Done

User Story

- A reviewed and accepted pull request
- Tested by team member and briefly tested by PR reviewer
- Meets the requirements of the ticket/task
- Has comments explaining what things do
 - Example

```
/**
 * Fetches profile data directly from the campus directory API.
 * This function does NOT use the cache.
 * @param {string} uID - The professor's User ID (e.g., "pdey")
 * @returns {Promise<object>} The raw data from the API.
 */
async function fetchProfileFromAPI(uID) {
```

Sprint

- Scrum Board & Burn up chart Updated
- Sprint Review & Retrospective completed and discussed with entire team

Style

- Make use of a component library when dealing with components(i.e. Material ui)
- Use camel case for naming for all files (html/css/js/py)
- Keep comments clear and concise, initializing our names afterwards for identification
- use npm run clean before commits
- Using functions for repeated code and to maintain modularity
- PR guide and template
 - [Reference](#)

Title of PR

should be related to the issue being done (check Jira)

- AMP ##: blah blah blah

...

Related Tasks/Dependencies

tasks related to or solved by the PR

dependencies should also be listed (PR/Jira ticket)

- AMP ## (link)

...

Overview/Premise

- if compromises/choices were made, include why here
- if research was done about a specific task-related topic or a different approach than standard for implementation, include why and key points
- if something needs to be refactored or otherwise needs to be fixed
- brief results of discussions (if discussed in meetings)

Changes

- list all changes that are applied, summarize the changes and state their meanings

Concerns/Notes

- list any doubts or contradictions regarding the implementation
- list any aspects that aren't obvious or are side effects
